

INSTRUCTIONS

FOR SOWING SEED BOMBS

01

SOWING TIME

Best in spring (April/May) or indoors in a jar at any time.

Thyme, basil or lavender seeds.

02

CREW "HEART"

The bomb should be placed and lightly pressed into the loose soil in a pot or garden. Water well. The water will soften the paper and "wake up" the seeds.

03

WAIT PATIENTLY FOR THE FIRST PLANTS

Place in a sunny spot (window sill or sunny part of the garden).

For the first 10 days or so, the soil should be kept constantly moist (but not soaked) until the first leaves appear. If a lot of plants sprout from one heart, feel free to carefully separate them into multiple pots.
